

Poly Wall Blue Barrier

Air & Moisture Barrier System

Polyguard Products, Inc. - Ennis, Texas

The Polyguard - Poly Wall Blue Barrier air and moisture barrier system is a family of products designed to protect all structural locations that are vulnerable to unwanted air, moisture and mold intrusion, including windows and doors, as well as structural penetration areas like transitions, joints, seams and claddings.

Formulated on the Dominus Innovations proprietary modified STPE technology, the Poly Wall Blue Barrier products cure and bond on wet or dry substrates, as well as on vertical waterproofing

surfaces. Poly Wall Blue Barrier is an efficient, superior single-stage family of liquid applied application products that provide the most effective air, water and mold defense on the market.

The Poly Wall Blue Barrier system includes a Liquid Flashing, Joint Filler, spray applied Liquid House Wrap and roller applied Flash & Wrap products. All Blue Barrier products are fully compatible.

To facilitate ease of installation and applicator productivity, the Blue Barrier line requires no primers or mixing and can be trowel, brush, gun, roller or spray applied depending on the product.

Like all Dominus Innovations technology, Blue Barrier products are low VOC and isocyanate free making them very environmentally friendly.

Polyguard Products Inc., founded in 1953, specializes in innovative products that protect surfaces and structures from moisture, water and undesired substances. Currently the company operates under three “core” divisions to serve its customers; an Architectural Division, Pipeline Division and a Mechanical Division.
